Metallurgical and Materials Engineering Professor Ryan O’Hayre has been awarded the 2010 ASM Bradley Stoughton Award for Young Teachers.

The citation reads: “For his outstanding contributions in teaching of materials science, and for his knowledge, enthusiasm and inspiration in developing the next generation.”

The award was established in 1952 in memory of an outstanding teacher of metallurgy and dean of engineering who was president of ASM in 1942 to encourage young teachers of materials science, engineering, design and processing by rewarding them for their ability to impart knowledge and enthusiasm to students.

The award presentation took place at the ASM Awards Dinner during the Materials Science & Technology 2010 Conference and Exhibition in October in Houston.
